

Can run gigabit fiber optic routers

Overview

If you're paying for gigabit fiber service, make sure your router supports at least gigabit Ethernet ports and dual-band or tri-band WiFi (like WiFi 5 or WiFi 6). Older routers could bottleneck your speeds. After providing you with the general image about the eight best routers for fiber internet. A fiber-optic connection is the best choice for fast home internet as it has a number of advantages compared to traditional copper cables, such as faster speeds and less interference. Our top overall pick is the Netgear Nighthawk RS700S, a Wi-Fi 7 router built for multi-gig fiber plans that handles up to 200 devices across 3,500 square feet. For budget-conscious. These are routers designed to work with the fast speeds and other advantages fiber internet brings to the table. These link multiple nodes to blanket your home in strong, reliable WiFi coverage, eliminating dead zones. In theory, gigabit internet can provide speed as fast as 1 gigabit per second or 1,000 megabits per second, but this full speed is mostly theoretical.
