

Distribution Box Main Drain

Overview

A distribution box, often called a D-box, is a small underground container that sits between your septic tank and your drain field. Its job is simple but critical: it splits the wastewater leaving your septic tank into equal portions and sends each portion to a separate trench in. The septic holding tank is a large, watertight container typically made of concrete, fiberglass, or polyethylene. Without it, wastewater would flood one section of the drain field while starving others, causing premature system failure. This comprehensive guide will explain what they are, how they work, why proper distribution is important, signs of a failing D-box, and steps for inspection, maintenance, and. Signs of Distribution Box Problems like odors, backups, and standing water. Locating Outlet Pipe near the distribution box for flow management. Role of Drain Fields in final treatment and disposal of wastewater.
