

## Distribution box limit indicator

### Overview

A clear, top-mounted visual indicator on a limit switch box (LSB) turns position into certainty at a glance, helping teams move faster, safer and with higher confidence. These limit switch boxes provide ample space for a variety of electrical and pneumatic switches or proximity sensors. This device provides both local indication via the beacon and remote indication via internal position sensors that send the appropriate signal to operations through the control. Limit switch attachments SRBG are the compact solution when it comes to electrical feedback signals and monitoring the position of process valves which are actuated by pneumatic quarter turn actuators. They can be mounted directly on quarter turn actuators with a connection pattern to VDI/VDE 3845. Visual open and closed indication is provided with an impact resistant dome style indicator.
