

Energy Internet Concept and Technology

Overview

The Energy Internet is a proposed framework for maximising the efficient collection, distribution, and management of energy sources using networked computing and communication systems. Energy Internet, sponsored by Chinese Society for Electrical Engineering (CSEE), and published by China Electric Power Research Institute (CEPRI) in cooperation with the Institution of Engineering and Technology (IET), is a multidisciplinary gold open access journal covering power and energy, power. Then, we propose a new universal definition of the EI by bringing together the various existing definitions and concepts in light of the upcoming smart grid. We also pinpoint the fundamental technologies responsible for ITM University Gwalior, India. Its features, such as plug-and-play mechanism, real-time bidirectional flow of energy, information, and money can lead to significant benefits and innovation in electricity production and. The concept of 'Energy Internet' (EI) has been widely accepted by both academic and industry experts after more than a decade of development. Some specific definitions were proposed for EI by.
