

Fiber Fiber FSC

Overview

Forest Stewardship Council (FSC) certification verifies that the fibre you create, source, or sell is sourced responsibly, making it a sustainable option for hygiene products, textiles, paper and packaging, and more. Most people don't realize how many everyday items are a. Forest fibre is naturally absorbent, durable, breathable, and biodegradable material from which many products are made, and it can be a sustainable choice when it comes from responsibly managed forests. The most significant tools to ensure sustainable forest management and a traceable origin of wood are the certification schemes PEFC (PEFC/02-33-21) and FSC® (FSC-C002102). Choosing FSC-certified fiber means: → Biodiversity is protected, including habitats for endangered species → Forests continue to function as carbon sinks, helping mitigate climate change → All the wood fiber we source and use must come from suppliers that are certified according to the Forest Stewardship Council® (FSC®) or Program for the Endorsement of Forest Certification (PEFC/16-33-1406). Our demand is that the fiber at a minimum will always meet the FSC Controlled Wood standard. FSC-certified plant fibers are sustainably sourced natural materials or materials originating as plant-based products.

Article Content

Fiber procurement

In addition to FSC and PEFC forest management and traceability certifications, we always conduct our own risk assessments of fiber suppliers based on our fiber

Fiber Development | Welcome To The FSC Members' Portal

Today, forest-based fibers also known as manmade cellulosic fibers (MMCFs) are the fastest growing textile fiber in the market. Only 50 per cent of MMCFs are certified where FSC holds a 25 per cent

Frequently Asked Questions
