

Fiber Optic Cable Laying Coil

Overview

Fiber optic cable should not be coiled in a continuous direction except for lengths of 100 ft (30 m) or less. 5 m) in length, with each loop 5 ft (1.5 m) in length. Minimize mechanical pressure on the outer sheath at crossing points: (armoured) cables crossing each other generate points of high pressure, so it is important when laying in figure 8 loops it is done in a correct way. When laying loops of fiber on a surface during a pull, use “figure-8” loops to. Fiber optic cables have Kevlar aramid yarn or a fiberglass rod as their strength member. You should pull on the fiber cable strength members only! Never exceed the maximum pulling load rating. On long runs, use proper lubricants and make sure they are compatible with the cable jacket. Although glass fibers are usually delivered in a similar form, wound up with many turns on some spool, that would often not be suitable. The Fiber Optic Association, Inc. The charter of the FOA was to promote professionalism in fiber optics through education, certification, and.
