

How to fix scratches on fiber optic patch cords

Overview

To fix it, first use a VFL laser or an OTDR to pinpoint the damage. For a permanent fix, fusion splicing is better than mechanical connectors because it prevents signal loss. Always protect the fiber optic cable repair with a sleeve and keep bends smooth in your trays. Locates fiber breaks and measures signal loss before and after. However, damage to fiber optic patch cords is inevitable due to frequent plugging and unplugging, improper bending, or environmental factors, leading to network signal attenuation or even complete outages. Inspect. Fiber optic patch cords are often treated as low-risk consumables, yet a large percentage of optical link failures originate at the patch cord level. Unlike backbone cables, patch cords are frequently connected, disconnected, bent, and handled by technicians, making them the most vulnerable. If you accidentally break a fiber optic patch cord in your server room or in any of your switch gear, now you can repair it on the spot and get back up and running in minutes. This guide addresses expert-certified best practices applied by professionals in the telecommunications, data.
