

Is the LED pigtail plugged in or out

Overview

So yes, led strip lights do need to be plugged in. They also require some power source like batteries or solar panels, meaning there's no way around using electricity either way! I just picked up 5 of these generic RGB LED flat pars that have no power input connector built in, but just a cable. I'm thinking about adding a Y-Split IEC pigtail going into the gland on the body of the fixture, so I can use it as both a power input and a power output to daisy chain more LED. Always match the LED strip's voltage with the power supply's voltage (e. Calculate total wattage and choose a power supply with at least 20% higher capacity. The new fixture I want to use is a.
