

## Is the fiber optic cable to your home connected to a router

### Overview

The fiber optic cable does not plug directly into a standard home router because the signal type must be translated. The fiber line terminates at the Optical Network Terminal (ONT), which is typically supplied and installed by the internet service provider. Why Use Fiber Optic Internet?

Before diving into the setup, let's quickly recap why fiber optics are worth the effort: Lightning-fast speeds (up to 1 Gbps or higher). A small box on the outside of your home called a NID is installed and the fiber is coiled in there and connected to a fiber that runs into the home. This comprehensive guide combines industry standards with field-tested practices to ensure you achieve a rock-solid. Once the fiber optic cable reaches your street or the immediate vicinity of your home, the process of connecting your individual residence begins.
