

Network rack structural thickness

Overview

The posts are usually made of steel of around 2 mm thickness (the official standard recommends a minimum of 1.9 mm), or of slightly thicker aluminum. Racks, especially two-post racks, are often secured to the floor or adjacent building structure so as not to fall over. Each module has a front panel that is 19 inches (482. The 19 inch dimension includes the edges or ears that protrude from each side of the equipment, allowing the module to be fastened. 2. 1 Pre-configured IT rack consisting of torsionally stiff, welded symmetrical frame of rolled 16-fold vertical members connected with two horizontal frames of rolled 9-fold members with integral channel for accommodating the adjacent panel seal and protecting it against possible effect of.
