

## Press-type cold splice

### Overview

Cold extrusion press system is a kind of flexible connection designed according to construction site. Reduce the time, labor and cost that comes with electrical cable splicing. High-quality crimping prevents oxidation and enhances the mechanical strength. Whether the splicing is mechanical, cold-bonded, or vulcanized: The quality of this endless splice significantly impacts the operational safety, ease of maintenance, and cost-effectiveness of a conveyor system. Henryk Myrzik has worked as a conveyor technology expert at REMA TIP TOP for nearly 20. Splicing products should be stored in a dry and dark place at a temperature between 59°F and 79°F (DIN 7716).
