

Reasons for circuit breaker tripping in the distribution box

Overview

Your breaker may trip due to circuit overload, short circuits, ground faults, outdated wiring, or a faulty breaker. Your circuit breaker will trip once in a while if it detects an electrical fault. For facility managers, electricians, and project owners operating overseas—from industrial plants in the Middle East to solar farms in Southeast Asia—these unexpected shutdowns mean costly downtime, safety risks. A circuit breaker is a small device in your electrical panel, fuse box, consumer unit or trip switch box that protects your electrical installation from overload, electrical faults and serious damage. If it's going off with a BANG, it's not good! The circuit breaker should have been carefully. Here are the 7 most common causes of a tripping circuit breaker. Cause: Too many devices or high-power appliances running on the same circuit.
