

Senegal Bridge Bend Series

Overview

The bridge is located in Saint Louis, in northern Senegal. All bridges are supplied by Waagner Biro and successively built under the supervision of its bridge . In autumn 2014, construction of the bridge de la Geôle (Pont de la Geôle) was successfully completed. VSL's expertise in bearing replacement was the key to completing the works on nine piers and two abutments in just two months, despite harsh weather and the restrictions of the. The Senegalese government has begun a vast project to provide the country with modern road infrastructure. As part of the implementation of the Emerging Senegal Plan (PSE), Matière® has been entrusted with the design and build of 18 Unibridge® bridges and flyovers that can be erected very quickly. Bridges and flyovers in Senegal are crucial for streamlining transportation, reducing traffic congestion, and connecting urban and rural regions. Designed to withstand heavy loads and dynamic forces, these structures enhance logistical flow and contribute to economic growth by providing. The city of Dakar, capital of Senegal and the westernmost point in Africa, is home to 25% of Senegal's population while occupying less than 0. 3% of the territory and traffic problems have long been a roadblock to progress. As the region's economic performance resonates throughout Senegal, better. The proposed project is an appropriate response to the lack of a permanent crossing structure between the two banks of the Senegal River, which constitutes the natural border between Senegal and Mauritania, constituting an impediment to the implementation of economic development and regional.
