

Warranty period for fiber optic cable junction boxes

Overview

Manufacturer splice box warranty varies between 12 months and 5 years: 5-year warranty is currently available only from a few manufacturers with their own European manufacturing facilities and ISO 9001:2015 certification. While standard warranties on fibre optic components typically range from 12 to 24 months, extended. With the increasing digitization and requirement for high-speed networking, the Bartec Technor junction boxes for fiber optic signals performs dependably in the harshest of environments. Applying our proven design found in the TNCN product line, we are able to provide long-term highspped junctions. After the products meet the quality standards, the test data will be printed and pasted on the outer box or bag, and stamped with QC seal to show the recognition of the quality of the products and as a proof of return service in case of quality problem. Leviton guarantees that the products will meet or exceed the overall system electrical and optical performance rating attributed to the cabling system and components as purchased, for the duration of the warranty period. (Such warranties may exist for electronic products).
