

What type of conduit should be used for outdoor distribution boxes

Overview

The main rules for outdoor receptacle outlets include the use of rigid metal conduit (RMC), which is a thick-walled threaded conduit, and the use of nonmetallic conduit and raceway made from PVC. Choosing the right conduit involves evaluating location, exposure, length of run, and whether it's above or below ground. Exposed wiring should be protected from damage and stapling bare wire to the siding would not qualify. Intermediate Metal Conduit (IMC): Approved for the same applications as RMC, IMC is a steel conduit that is slightly lighter than RMC and rated for outdoor use. It is commonly used with outdoor. This guide explains outdoor cable conduit types, UK standards such as BS 7671, selection criteria and installation tips, so your next install is safer, neater, and built to last. Outdoor environments present unique challenges, including exposure to the elements, temperature fluctuations, UV.
