

Why is it necessary to install a fiber optic router

Overview

For the connection to work correctly, suitable end equipment is needed. Most commonly, it is a router for the fiber optic cable, which connects to the optical outlet and distributes the internet throughout the household, either via cables or using Wi-Fi. Compatible router: Verify that your router supports fiber optic input (look for an SFP or WAN port labeled). Depending on where it terminates, various types of fiber optic connection are distinguished: FTTN (Fiber To The Node) – the cable ends at a node several kilometers away, and the rest of the journey uses another cable. Typically, when you purchase a fiber optic Internet plan, your ISP will install their own modem and router that you rent from them. A fiber Internet service like Google Fiber offers faster speeds, better reliability, and bigger bandwidths than regular routers. A. The short answer is no, you don't necessarily need a special router for fiber optic internet.
